

Master Course Syllabus
School of Engineering and Computer Science
Washington State University Vancouver

CS 466/566
Embedded Systems
3 Semester Hours
(2 lecture hours, 3 laboratory hours)

Course Instructor

David 'Miller' Lowe (Adjunct, Firmware Engineer, Trail Tech)

Office Hours: Planned, Before Class

E-Mail: miller.lowe@wsu.edu, milhead@gmail.com

Class Hours

Tuesday (lecture) 6:00pm to 7:40pm VECS 122

Thursday (lab) 6:00pm-8:30pm VECS 221

Catalog Description

Design and development of real-time and dedicated software systems. Introduction of driving sensors, actuators and typical embedded communications.

Prerequisite Courses

CS 360 – Systems Programming

Prerequisite Topics

- o Proficiency with the C programming language
- o Basic understanding of digital logic
- o Microprocessor systems and interfacing
 - o Operating systems concepts including concurrent programming, process synchronization and memory management.

Measured Course Outcomes

Students taking this course will:

1. Choose an appropriate scheduling algorithm and use it to schedule tasks in a real-time operating system, meeting the real time constraints of the system (*contributes to performance criterion E-1*).
2. Use synchronization primitives to control communications between tasks with different priorities in a real-time operating system (contributes to performance criterion A-2).

1. Design, implement and debug an embedded or real-time software program which controls external devices and interprets data from external sensors (*contributes to performance criterion E-2 and B-5*).

Required Textbooks

David Simon, An Embedded Software Primer, Addison-Wesley, 1999, ISBN 0-201-61569-X

Reference Material

Embedded Systems Journal (various articles specified)
ARM Info Center (<http://infocenter.arm.com>)

Grading

Homework/Labs	35% (Late Assignments will loose 5% per day)
Presentation	5%
Midterm	30%
Final	30%

Major Topics Covered in the Course

1. Review of microprocessor architecture and interfacing
1. Hardware architectures of embedded systems
2. Software architecture of embedded systems
3. Real-time operating systems (RTOS)
4. Communication in embedded systems
5. Real-time system specifications
6. Debugging real-time systems
7. Security & protection for embedded systems
8. Object-oriented design in RTOS
9. Advanced topics in embedded systems

Lecture Material

Tests and some assignments will be developed from the text, lab references and lectures. Any material presented in class, written or discussed may show up on the test.

Laboratory Projects

Lab material will be provided via a git repo https://github.com/milhead2/cs466_s17.git

The students are required to implement embedded computer systems that sample a variety of sensors and actuators, constructing hardware or software interfaces to the sensors and actuators. Students also learn to use logic analyzers and digital oscilloscopes. Typical projects are shown below.

Lab	Description	Weeks
1	Get your development environment and compile the simple blinky.c firmware <ul style="list-style-type: none"> • Get the hardware running.. • LED Output / Button Inputs • Bare-metal 'blinky.c' single-threaded implementation. • TM4C123GH6PM Microcontroller DATA SHEET • Empirical clock measurement using lab instruments 	1
2	Blinky Firmware revisit under RTOS control <ul style="list-style-type: none"> • Setup FreeRTOS scheduler and heartbeat task. • Generic task structure and blinky.c refactor • Using USB-Serial for output. • OS clock measurement using lab instruments 	1
3	RTOS Producer/Consumer using threads and Queues. <ul style="list-style-type: none"> • Use tasks, Queues, assert() • Connect GDB and debug over ICDI using OCD • Use GDB debugger to analyze Assert 	1
4	Simple Remote Device Communication <ul style="list-style-type: none"> • Pin Muxing • SPI master communications (bitBang and ASIC peripheral) • External interrupt handling. • Use Timers to measure round trip times. • Watchdog hang protection. 	2
5	Inter-Processor Communication via SPI <ul style="list-style-type: none"> • SPI Slave Device interface implementation. • DC Motor Operation Basics 	2
6	DC Motor Control <ul style="list-style-type: none"> • Manual Quadrature position sensing • Position servo PID implementation • Tuning a Wikipedia PID control loop • Velocity servo PID implementation 	2
7	Final Project, SPI Connected, Multi-Processor, Lab. <ul style="list-style-type: none"> • Still debating what final lab will entail. 	5

CSAB Category Content

	FUNDAMENTAL	ADVANCED		FUNDAMENTAL	ADVANCED
Data Structures	0	0	Computer Organization and Architecture	0	1
Algorithm & Software Design	0	2	Concepts of Programming Languages	0	0

Oral and Written Communications

A single assignment is dedicated to an oral presentation. Students must obtain pre-approval from the instructor of a topic of interest in embedded systems. Student presents a PowerPoint based slide presentation of 10 to 20 minutes and must answer questions from the instructor and other students. Students are graded on the presentation and their ability to answer questions.

Social and Ethical Issues

This course contains no significant coverage of social and ethical issues.

Theoretical Content

This course contains no significant theoretical content.

Problem Analysis

For the programming projects, students determine requirements for the programs in consultation with the instructor and must perform sufficient analyses of the requirements to arrive at an effective program design.

Solution Design

Programming projects require the student to perform substantial design to arrive an implementation that fulfils the functional requirements and is both robust and well organized. Typically, the final programming project consists of >500 lines of code, some of which may be assembly language.

CC2001

This course provides coverage of topics in the following areas (hours listed are minimums):

OS4. Scheduling and dispatch [core]	3
OS9. Real-time and embedded systems [elective]	16
SE12. Specialized systems development [elective]	4

CS566

This course provides additional coverage of topics in the following areas (hours listed are minimums):

ENCS-GO1 – Understanding of code generation of mundane and interrupt specific code sections.	5
ENCS-GO3 – Report and Presentation of final lab	2
